

TENCATE PERFORMANCE COMPOSITES

The leading provider of premium orthotic material

OrthoGolfer Elite®

TenCate's XTS is a continuous fiber reinforced thermoplastic (CFRT®) composite laminate, blending the benefits of a thermoplastic polymer with uni-directional glass fibers for enhanced performance. The XTS style laminate is offered in multi-layer constructions and orientations. Its ultra-thin, lightweight, and resilient properties allow for improved energy return and impact resistance.

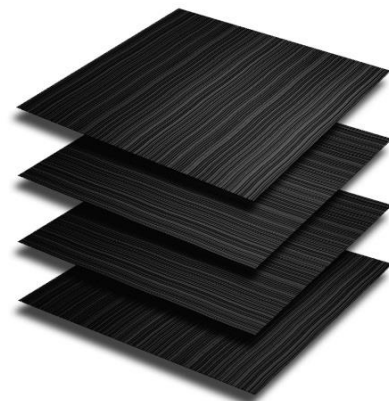

Material: TenCate CFRT® XTS

Advantages: XTS is lightweight and the material is both reformable and recyclable. It blends the benefits of a thermoplastic polymer with uni-directional glass fibers for enhanced performance.

Processing: Thermoformed to shape and injection over-molded for fine details,

Product Details: OrthoGolfer Elite® is the first over-the-counter golf "orthotic" specifically designed to aid players in correcting their stance and perfecting their golf swings: allowing golfers to swing smoother, drive further, and reduce slices.

TenCate's materials were selected for this application to achieve a light weight, thin profile. Our extensive history in Medical, Podiatry, and Orthopedic markets contributes to the biomechanical advantage of this engineered design solution. The products supplied by TenCate include outer packaging, the insole, composite material in addition to design services.
